CPMR Transport Working Group
8th of June 2022
Aviation

Francesco Catte
Policy Analyst for Energy and Transport
CPMR contribution to the Air Service Regulation (No 1008/2008)

Regulates internal aviation market and set rules for imposing PSOs, the CPMR contribution focused on general objectives & environmental concerns

The CPMR stressed the importance of:

- Promoting environmentally sustainable connectivity for all EU regions
- Promoting socially responsible connectivity for all EU regions
- It also stressed the need to integrate, in a clearer way, the promotion of social, economic, and territorial cohesion
The CPMR stressed the high relevance of the following measures:

- Authorities should be able to ban or limit flights for environmental reasons only if there are more sustainable modes of transport offering comparable connectivity (such as in terms of frequencies and times schedules) for the route.

- Before banning or limiting flights for environmental reasons or imposing conditions, the responsible authority should consult interested parties and make a detailed assessment of the environmental, social and economic impact, from both a short and long-term perspective.
Revision ETS aviation

Proposal aimed at ensuring aviation’s contribution to the EU climate objectives

Two different approaches concerning derogations for flights to and from outermost regions:

1) ENVI Committee position
   Derogation until 2027 applying to flights from and to the outermost region and its Member State mainland (e.g. Ponta Delgada – Lisbon)

2) Amendments by MEPs from different groups (TRAN position)
   No specific timeline for when the derogation would end and application to flights from and to an outermost region, between two different outermost regions and between islands inside outermost regions
CPMR informal group on aviation

Bring together the interested regions on aviation to gather input on legislation, exchange of best practices, have meeting with key stakeholders

Focus on:
Air connectivity
Public Service Obligations
Decarbonisation solutions (electric flights, SAFs)
Role of regional airports
Innovation
Thank you!
